# TEX-REX®

## America's Most Powerful Production Air Rifle

### Maximum-Tunability from AirForce

#### ◆ WANT MORE SHOTS?

The Tex Rex® comes with three bias port screws, 0.040, 0.059, and the 0.067 screw which is preinstalled. By using the 0.067 or 0.059 bias port screw, shooters will get more balanced power with medium slugs. To get the most number of shots with lighter slugs, remove the screw altogether.

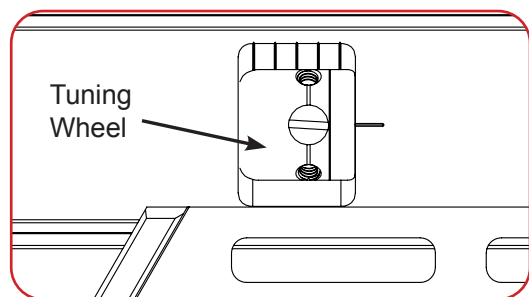

#### ◆ WANT MAX POWER?

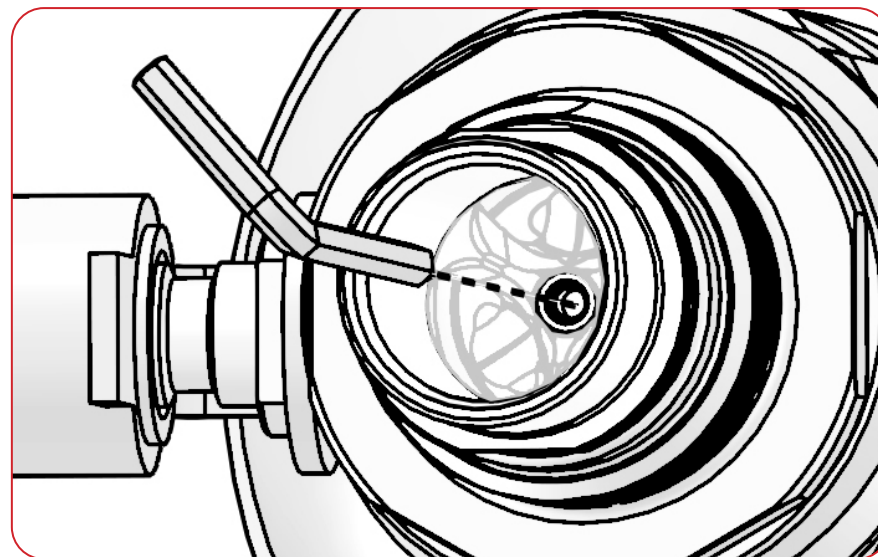

Use the 0.040 Bias Port Screw (smallest hole) for unmatched stopping power and range. This screw will use the most air per shot compared to the other screws.

#### ◆ WANT EVEN MORE TUNABILITY?

Use the external tuning wheel on the Tex-Rex to balance your rifle's power for multiple shots. More information can be found in the user manual.

#### BIAS PORT SCREW LOCATION

**Above:** The included 2mm hex key fits into the valve pin to access the Bias Port Screw. Turn counterclockwise to loosen, or clockwise to tighten. Secure to 3 inch-pounds of torque.
